DB Series™ Synthetic Roll Media & Cut Pads

- Available in either media rolls or cut pads
- Several media types to choose from
- We use a dual-denier media design that is more dense on the air exit side
- A non-migratory dry tackifier is applied to improve dust holding capacity
- Our air-laid process offers improved media consistency

DB Series™ Filter Media is a Star Performer...

IT IS COST EFFECTIVE

Our synthetic media rolls and pads offer a lot of bang for your buck. Easily trimmed-to-fit and easily installed, synthetic media is one of the most cost effective filtration solutions employed in today's commercial and industrial applications. Often used alone, but may also be used as a pre-filter for more costly final filters.

IT HAS HIGH DUST HOLDING CAPACITY

Today's modern media types are an improvement upon the past. Our dual denier media with non-migratory dry tackifier offers better efficiencies and more even dust loading. Our media is constructed using an air-laid process to offer a more uniform consistency.

IT IS EASY TO USE AND TRANSPORT

Synthetic media can be easily trimmed in the field with scissors or a razor knife. It can be bagged for easy transport and disposal by service personnel. Synthetic media is also much less likely than framed filters to get damaged while in transit to the job.

Prices and specifications are subject to change without notice. All sales are made subject to the terms and conditions contained in the Filtera, Statement of Business Policy, as revised from time to time, a current copy of which is available upon request.
